

Antonio Pulido Fernández

Full Stack Developer | AI & Automation | Builder

Cordoba, Spain • hola@antoniopulido.dev • +34 614 142 001 • github.com/letualtv • antoniopulido.dev • linkedin.com/in/antoniopulidof

SUMMARY

Full Stack Developer with a strong bias for action: **I turn ambiguous ideas into deployed, functional products** — end to end, with minimal supervision. Experienced in Laravel, Vue.js, and REST API development, with production systems used by 17,000+ users. Currently building **Bahiga**, an AI-powered automation SaaS for SMEs, integrating Claude API, WhatsApp Business, and email automation workflows. I actively use AI tools (Claude Code, Cursor) as force multipliers, not crutches. Comfortable with fast iteration, autonomous decision-making, and full product ownership from architecture to deployment.

PROFESSIONAL EXPERIENCE

Full Stack Developer & AI Builder

May 2026 – Present

AP.DEV (Freelance) | Remote — Cordoba, Spain

- Founder of **Bahiga**, an AI automation SaaS for SMEs: chatbots, email classification, receipt processing via WhatsApp, and automatic document archiving.
- Integrated Claude API and WhatsApp Business API to build autonomous multi-channel agents that handle customer support, lead capture, and scheduling 24/7.
- Developed full-stack web projects end-to-end (Laravel + Vue.js + Tailwind) for local businesses, including e-commerce stores and custom management panels.
- Sole owner of the entire product lifecycle: architecture, development, deployment (Hetzner/Caddy/Redis), and iteration based on real user feedback.
- Delivered a WordPress/WooCommerce e-commerce site for a tech retail client within one week, including custom checkout flows and SEO configuration.

Full Stack Developer

Oct 2024 – Feb 2026

IESA - CSIC (Public Research Institute) | Cordoba, Spain

- Led the full modernization of a social survey management system used by **17,000+ respondents** and 50 internal researchers.
- Designed and built a Laravel REST API backend with Eloquent ORM, handling complex relational data models and high-volume query optimization.
- Built dynamic, responsive UIs with Vue.js and Vite following mobile-first standards; improved async loading and caching for platform scalability.
- Worked autonomously within multidisciplinary teams, translating research methodology requirements into maintainable software architecture.

Web Development Intern

Mar 2024 – Jun 2024

Fundación MEDAC | Cordoba, Spain

- Built full-stack web applications including a 3D dentistry portal with WebGL graphics, secure auth (AWS/Firebase), and mobile-first UX.
- Delivered landing pages, interactive forms, and responsive interfaces using React, Node.js, PHP, and Bootstrap.

KEY PROJECTS

Bahiga — AI Automation SaaS for SMEs

- **Founder and sole developer** of Bahiga: a multi-tenant SaaS that brings AI automation to small businesses — intelligent chatbot engine, WhatsApp Business integration for lead capture and support, OCR-based receipt processing, and email classification and archiving via Claude API.
- Multi-channel agent architecture: customers interact via web chat or WhatsApp; the system handles FAQ responses, appointment scheduling, and lead capture 24/7 without human intervention.
- Stack: Laravel (backend API), Vue.js 3 (client panel), MySQL, Redis, Caddy — self-hosted on Hetzner VPS. Full ownership from architecture to deployment. Stripe billing integration in progress.

ABRIL — Social Research Survey Platform (IESA - CSIC)

- **Built from scratch in pure PHP (no framework)** and MySQL for IESA - CSIC: full survey lifecycle platform covering design, participant management, phased distribution, response collection, cross-tabulation, and dataset export.
- Custom Front Controller architecture, PDO, OOP, 9 question types with conditional skip logic, hybrid JSON+MySQL storage, and per-survey independent databases. Full mailing module with scheduled reminders and automated open/close by date.
- Multi-level permissions (view/edit/owner per survey), OAuth access for participants, dual session management to avoid CP/survey collisions. Admin panel with multi-survey management, results visualization, and one-click dataset export for research use.
- CI/CD via GitHub Actions with webhook deploy. Deployed on two production servers (CSIC internal infrastructure + Hostalia). Load-tested with k6. Ongoing contract — one of my main active projects.

antoniopulido.dev — Developer Portfolio

- Built with Vue 3 + Vite + Tailwind CSS. Dark/light mode, i18n (ES/EN), SEO-optimized, deployed on Vercel with security headers.

TECHNICAL SKILLS

Languages	PHP 8 (Advanced), JavaScript (ES6+), SQL, TypeScript (basic), Python (basic), HTML5, CSS3
Frontend	Vue.js 3, Astro, Tailwind CSS, Vite, Blade, Bootstrap 5, Vanilla JS
Backend	Laravel, PHP (no-framework), Node.js, REST APIs, PDO, Eloquent ORM
Databases	MySQL (Advanced), SQLite, PostgreSQL, Firebase
AI & LLMs	Claude API (Anthropic), OpenAI API, Prompt Engineering, AI Workflows, AI-assisted development (Claude Code, Cursor)
DevOps & Infra	Git/GitHub, GitHub Actions, CI/CD, Docker, Caddy, Hetzner VPS, Vercel, XAMPP
Tools	PHPUnit, ESLint, k6 (load testing), Scrum/Kanban, Clean Code
Integrations	WhatsApp Business API, Meta API, Google APIs, Stripe, Web3Forms, PHPMailer

EDUCATION

Associate Degree in Web Application Development (Técnico Superior DAW)	2024
Medac centro de formación, Cordoba, Spain	

CERTIFICATIONS

- Applied Artificial Intelligence for Business (IFCT0019) — Prompt Engineering, ML/Deep Learning, Big Data.
- Digital Transformation & Change Management Program — Grupo Euroformac.
- E-Commerce Web Development (IFCD022PO) — Node.js, MySQL, UX, Google Analytics.
- SEO & Search Engine Positioning (COMM061PO & ADGD211PO) — Advanced SEO, SEM, Google Ads.

LANGUAGES

Spanish	Native
English	Professional working proficiency (B2-C1)
